## DESCRIPTION

---

### **Pump Protection / Level Sensor for Whirlpool Baths**

Pump protection is an advisable feature for whirlpool baths particularly if you have children as they love pressing buttons.

This device ensures the pump doesn't operate unless the correct amount of water is present in the system (above the whirlpool jets) as a result it will not overheat and damage the pump seals.

The device is built into the pump, no installation is required.

This item cannot be delivered, it is installed in our factory before delivery of your bath.
