
PRODUCT

POE-EXT - POE Extender

PoE network cable runs are limited to around 100m maximum length which can be a little short on occasions.

The FV-PRO PoE extender can go 3x as far to create cable runs up to 300m! The small in-line unit requires no external power source so it can be fitted almost anywhere along the existing network cable run to make a quick and easy installation.

Up to 2 units can be used on a run to reach up to 300M with each extender connected to the end of a 100m max cable run to boost the power and data for another 100m.
