

## Yaesu ATAS-25 Yaesu Active Antenna System **£215.00**

### DESCRIPTION

The Yaesu ATAS-25 utilizes a manual tuning system that resonates the radiating element for the lowest SWR without the need for expensive mono-band resonating whip assemblies. It allows dual-frequency operation on HF or 50MHz and either 2m or 70cm (duplexer not supplied). A very handy feature is that the ATAS-25 is designed to mount directly onto a standard camera tripod mount (not supplied) and makes up a portable antenna system ideal for temporary field operation but not recommended for long-term outdoor installation, supplied with radiating elements, radial elements for VHF/UHF, radial wires + spare radial wire, Allen key.\* Frequency range: 7/14/21/28/50/144/430MHz,\* Input impedance: 50 Ohms\* Max Power input: HF/50MHz: 100W (SSB/CW), 50W (AM/FM), 144/430MHz: 50W (All mode)\* Matched VSWR: <math>\leq 2:1</math>\* Height Max 2.2m (7.2ft), 0.6m (1.96ft) for transporting\* Weight: 930g.
