

G5RV 1/2 Size (51 Feet) Superior HF Wire Antenna / Aerial

£34.96

DESCRIPTION

The Radioworld G5RV Half Size HF Wire Antenna is an HF Amateur Band, Receive and Transmit Antenna, covering 40m to 10m bands. It's overall length is 51ft , and should be fed with good quality 50 Ohms coaxial cable (recommended feed length of 45 or 90 ft). The ribbon cable should hang downwards and forms part of the radiating antenna. To achieve optimum results, this antenna should be mounted as high as possible, either horizontally or in an inverted "V" formation, with the centre mounted at least 36 ft from the ground. The superior 1/2 size G5RV comes fully assembled & ready to go. Also, the Poly Weave wire will not kink and is extremely strong. Excellent for use where space is limited, good for unobtrusive garden or attic installation and also highly recommended for Short Wave listening. UK manufactured and supplied complete with ladder feed and dog bone fittings.
