The TabTime Medelert Automatic Pill Dispenser with alarm and lock is a best-selling device that ensures access to the correct dose, at the correct time.

- Timed pill dispenser; up to 6 alarms per day
- Large compartments (up to 12 aspirin sized pills)
- Easily programmed and battery operated (portable)
- **Radio Controlled Time Accuracy** - Easy set-up and time automatically adjusts for daylight savings (DST)
- CE and ROHS certified

The combination of both an audio and visual alarm ensures users access their correct dosage of medication, at the appropriate time, whilst also keeping other pills inaccessible.

The features of this electronic pill dispenser make it very popular for people with cognitive loss, however, it's also enjoyed success as an Automatic Pill Dispenser for elderly individuals whose memory may not be as strong as it once was.

**Radio Controlled Time**

Our version of the Automatic Pill Dispenser includes radio controlled time updates by default. This allows for a quicker set-up and means medication will continue to dispense at the correct time, including automatically correcting for daylight savings twice a year.

**How it works - User’s Perspective**

At a preprogrammed time the Automatic Pill Dispenser with alarm and flashing light will sound, to remind the user to take their medication. At this point, the unit will also rotate the compartment so that the medication can be accessed.

When the user tips the unit to retrieve the medication the alarm and flashing light will cancel.

**Safety Features**

- User can only access 1 dose of medicine at a time, prevents double dosing
- Low battery alert
- Alarm + flashing light sounds for 30 minutes unless user takes medication
- Loud volume alarm

The safety features of the device make it a very popular automatic pill dispenser for Alzheimer’s patients, or as a dementia pill dispenser.

**Refillable at your local pharmacy**

To help with the refilling of medication at a pharmacy, the Automatic Pill Dispenser comes with a medication label and retaining case. The ability to refill the dispenser at pharmacies is another feature that makes this device a useful pill dispenser for dementia patients.

We recommend adding a *Spare Tray* to your order if you intend to refill the dispenser at a pharmacy, as this allows
you to rotate the trays so the user always has access to their pill dispenser.

This can be done by ticking the box located next to the product image: “Spare Tray for Automatic Pill Dispenser”.

What pharmacies offer this service?

Many pharmacies will fill the dispenser upon request. However advanced warning or information about the dispenser may be required, simply take a copy of the Automatic Pill Dispensers instruction manual to a pharmacy and ask whether they offer this service.

Cycle Examples

Once a day medication - Refill every 28 days
Twice a day medication - Refill every 14 days
Three times a day medication - Refill every 9 days
Four times a day medication - Refill every 7 days

Contents
