The **Pivotell® Advance Automatic Pill Dispenser** is a premium automatic pill dispenser that incorporates a number of important and advanced features which are designed to help both the user remain compliant with their medication regime and further support their family members, carers and pharmacists.

- **Automatic Dispensing** - Can be filled and programmed by the user, relative, carer, or pharmacist to dispense pills up to 24 times a day
- **Security** - A self-locking shutter over the lid opening prevents access to the medication tray except at the alarm time. This prevents the possibility of double dosing or the forced movement of the medication tray by the user
- **Display** - The LCD display is visible through the lid allowing the user and carer to view: the date and time, the time that the next dose is due, the number of doses remaining, the battery level
- **Start Delay and Stop functions** - Delays activation or deactivates dispenser - useful for those using multiple dispensers and to allow pharmacists or family members to fill in advance away from home
- **Upside-down** - The tray will not rotate if upside down. When upright it will move to the correct dose for the time & date at the next alarm time

**Radio Controlled Time**

The Pivotell® Advance Automatic Pill Dispenser includes radio controlled time updates. This allows for a quicker set-up and means medication will continue to dispense at the correct time, including automatically correcting for daylight savings twice a year. This feature can also be turned off.

**Safety Feature - Upside Down Usage**

- The tray will not rotate if upside down. When upright it will move to the correct dose for the time & date at the next alarm time

This also allows for the possibility that the dispenser could be transported upside down. If a dosage time occurs when the dispenser is upside down it will alarm as usual but the tray will not move forward.

If the dispenser is upside down for some time the dispenser will record on how many occasions it should have rotated and when returned to the upright position will move to the correct position for the next scheduled dose so that the correct medication for that time will be presented.

**Alarm Function**

- At the pre-programmed times, the dispenser rotates, the alarm signal is heard, and the correct dosage comes into view through the opening in the lid
- Alarm can be programmed to ring for up to 5 hours
- Pills can be dispensed 1-24 times a day
- 4 different alarm sounds (including a **silent** option)
- Flashing alarm indicator for those with hearing impairment

**Dispensing Medication**

- Compartments - 28, two or more compartments can be programmed to alarm at the same time
- Multiple compartment dosing - Two or more compartments can be programmed to alarm at the same time (for those with a high quantity and/or large pills)
- Start delay function - Delays activation to allow pharmacists or family members to easily fill in advance away
from the user's home
- Stop function - Deactivates dispenser - useful for those using multiple dispensers in the home
- A Pharmacy label carrier and label case is supplied (to comply with Royal Pharmacy Society of Great Britain labelling requirements)
- Day/time discs supplied (for 1 / 2 / 3 / 4 times daily dosage and one blank disc for five or more doses per day)

Cycle Examples

Once a day medication - Refill every 28 days
Twice a day medication - Refill every 14 days
Three times a day medication - Refill every 9 days
Four times a day medication - Refill every 7 days

Refillable at your local pharmacy

To help with the refilling of medication at a pharmacy, the Pivotell® Advance Automatic Pill Dispenser comes with a pharmacy label carrier and label case, these comply with the Royal Pharmacy Society of Great Britain labelling requirements.

What pharmacies offer this service? Many pharmacies will fill the dispenser upon request. However advanced warning or information about the dispenser may be required, simply take a copy of the instruction manual to a pharmacy and ask whether they offer this service.

LCD Display

The LCD display feature is of particular benefit to carers/family members who can make a visual check on the status of the dispenser without having to open it, allowing the user and carer to view;

- The date and time
- The time that the next dose is due
- Number of doses remaining before refill
- Battery level (and low battery warning)

The LCD display will show the information above in the following circumstances;

- Pill dispenser is horizontal - Shows date and time in sequence
- At the alarm time - "Take Med" displayed on screen
- When dispenser is tilted forward - Next dose, No. of doses left, Battery level, Date
  Example: NEXT DOSE 16:30 MON || DOSES LEFT 9 || B (battery level) 75% || DATE: 23 SEPT 2016
- When only 4 doses remain the display will additionally show DOS 04. After this dose has been dispensed DOS 03, DOS 02, DOS 01 and finally DOS 00 will be displayed in sequence with the DATE and CLOCK
- When the battery capacity is less than 20%, LOWBATT will be displayed in sequence with the DATE and CLOCK

Other Features

- Low battery warning - Battery level meter and low-level warning
- Secure battery cover - Deters tampering (screw provided)
- Additional trays, lids, and time discs available for off-site filling by family members or pharmacists (sold separately)
- Volume: 10ml per compartment

Contents
