The **Simple Music Player in Red/Green** is an easy-to-use MP3 music player for individuals with impaired cognition, memory loss, or Alzheimer's.

- The simplest of operation, play music by lifting the clearly indicated lid, close the lid to stop
- Controls have been demonstrated to be highly intuitive, requiring no prior knowledge or explanation
- Volume set by family, friends, or carers, so it cannot be accidentally changed
- Music uploaded via USB to any Windows, Apple, or Linux PC
- Capacity: 4GB (approx 1000 songs)

### Dementia Research

The "dementia music player" was developed in light of research undertaken by **Designability**, which showed many benefits of providing people who have dementia with music they enjoy.

Many of our customers have shared experiences of their loved ones enjoying the act of listening to music, but they've sadly lost the ability to operate a conventional music player; The Simple Music Player for dementia was designed to overcome this problem.

The design of this MP3 player also makes it a popular choice as a simple music player for elderly people who find modern MP3 players difficult to operate.

### How to use the Simple Music Player

1. To start playing music, simply lift the lid
2. Underneath the lid is one large button that can be used to skip track (optional)
3. Close the lid to turn the music off

The music will continue from where it was last stopped.

How to upload music
