Code: 1005325

Price: £114.00 incl. VAT

Date: 07/05/2021

VAT Relief Eligible: Yes (£95.00 with VAT relief)

Delivery: £3.95 incl. VAT per order

The **Pivotell Mk3-11 Automatic Pill Dispenser** reminds the user by means of an alarm and flashing light when to take their medication. It will make the correct dose available at the correct time of day or night, whilst keeping other pills locked out of sight.

- Lockable - only the medication due can be accessed by the user
- Secure battery case cover to deter tampering (screw provided)
- Incorporates an antibacterial silver ion technology to provide protection against harmful microbes such as bacteria and viruses

Pivotell® Automatic Pill Dispensers have been widely used throughout the UK since 2002. The Mark 3/11 dispenser, with its enhanced functionality and proven reliability is the preferred choice among professional care agencies within the NHS and Local Authority Social Services and has been continuously developed since it was first designed and patented in 1997.

How the Pivotell works

- When the alarm sounds the internal tray will rotate one position and the correct dosage will come into view in the lid opening
- Pills should be removed from the dispenser by tilting it and pouring the pills into the hand or suitable container
- The tilting of the dispenser will cancel the alarm signal and flashing light

Start Delay Function

- Delays activation to allow pharmacists or family members to easily fill in advance away from the user's home

Refilling, Pharmacy Label & Carrier

- A Pharmacy label carrier and label case is supplied
- For easy pharmacy filling one compartment is left empty (29 compartments in total)
- Complies with Royal Pharmacy Society of Great Britain labelling requirements
- The medication tray rotation can be disabled

Loading the Pivotell® Dispenser

The dispenser is supplied with clearly printed discs. The discs identify the appropriate number of doses per day (between 1 and 4) - Blank discs are supplied which should be manually completed for those on five or more doses daily.

- The appropriate disc for the pill regime is then placed on the tray prior to filling it, and used as a guide as to where to place the pills
- The red section remains empty to help with offsite filling by Pharmacy and transport home
- The refill frequency will depend upon the number of daily medications (up to 28) for example;
Once a day medication refill every 28 days
Twice a day medication refill every 14 days
Three times a day medication refill every 9 days

Four times a day medication refill every 7 days
Seven times a day medication refill every 4 days

N.B. Certain medication should not be placed in medication dispensing systems. If in doubt check with a pharmacist.

Safety Features + Upside Down Protection

- Upside down warning
- If the dispenser is left upside down, to avoid pill spillage. The alarm will still sound at a dosage time
- An alarm signal (different to the preset alarm sound) is activated if any fault should arise which effects the rotation of the dispenser
- Test Mode - the PivoTell dispenser has a built-in test function which should be activated periodically

Alarms

- Daily Alarms, from 1 to 28 per day
- Two or more compartments can be programmed to alarm at the same time for those with many or large pills
- Alarm can sound for 1 hour
- 4 alarm sounds
