Delivery: £3.95 incl. VAT per order

We understand the value of independence. Our **Friends and Family SOS Button** gives you your freedom, while offering friends and family the reassurance you can contact them no matter what.

- Small and unobtrusive at just 6 x 3.5 x 1cm
- The SOS button uses mobile technology, allowing it to work anywhere there is a mobile signal
- Two-way conversation, allows you to talk through the pendant
- Automatically dials 3 user programmed numbers when SOS button is pressed
- The same contact details can also be added to any number of SOS Buttons if multiple copies are needed

How it works

The neck or wrist worn SOS button automatically calls three landline or mobile numbers set by you, one after another until answered, then allows you to talk through the pendant.

Once connected, you can alert your friend or family member to your situation. They can take immediate action, whether it be to call the emergency services or a neighbour, or to arrange help with daily chores.

Please also note that this device does not track the wearer, it is intended solely as a communication device.

Battery & Power

- Powered by a USB rechargeable lithium battery, offering 30 minutes talk time and up to 6 months standby
- Low battery indicator with optional SMS alert

Remote configuration

With SMS setup, the numbers and functions can be altered remotely to ensure the device is always up to date

Other Features

- Uses mobile technology to provide instant help wherever you are - at home or out and about (requires SIM card)
- Supplied with lanyard for use as a pendant and USB cable
- Optional wrist strap and USB charger available

SIM Card Included

- A roaming SIM card is included with the product
- The included SIM has excellent tariff rates for UK usage, however, additional charges may apply to the channel islands and for international customers, please contact us for further information

Can I use my own SIM?

- Customer's can choose to use their own SIM card but technical support cannot be offered by ourselves or the manufacturer as we do not have access to phone logs and usage data
- The SIM card must be able to use the 2g data network, most SIM providers won't have any issue with this but we recommend checking beforehand (the '3 network' SIMs are not compatible with the product)
